Edge AI 360-degree fisheye camera that provides video surveillance without any blind spots and business intelligence.

12MP Sensor Indoor 360 Fisheye Network Camera with AI engine

The new S-series fisheye camera is a new-generation camera equipped with an AI processor that realizes edge AI processing. With a high-performance fisheye lens and our own video compression technology, it is possible to clearly shoot 360 degrees in all directions up to the periphery of the screen with a single camera.

The camera is equipped with an AI processor, and contribute to solve various problems by installing an AI application according to the purpose.

It is possible to visualize the number of people and the congestion status with a dashboard that can be customized according to the customer's operation style, and use it for business intelligence purposes.

Key features

- The AI processor equipped with a camera realizes motion detection of people / vehicles, number counting, and congestion detection. It also supports third-party AI applications and can meet a variety of AI demands. The data aggregated inside the camera can be visualized on the dashboard in cooperation with our system, and can be used for marketing and business intelligence.
- Equipped with industry standard protocols such as ONVIF, it can be linked with third-party display software as an IoT terminal for sensor networks. Furthermore, it is possible to integrate and utilize it in another system customized according to the customer's operation.
- Equipped with a high-performance fisheye lens that has been well-established in the market, one camera can clearly shoot 360 ° in all directions up to the periphery of the screen.
- Our original smart coding compatible with H.264 and H.265 delivers high-resolution video at high image quality and low bit rate. Achieved useful images by combining with highly visible images by the intelligent auto (iA) function.

*1 Converted value
*2 When "On (level 30 or 31)" is selected for "Wide Dynamic Range(WDR)", the frame rate is restricted to a maximum of 15fps (30fps mode) or 12.5fps (25fps mode).
*3 When "Single PTZ" mode is used in wall installations, the 2560×1920 resolution cannot be used.
*4 Transmission for 2 streams can be individually set.
*5 When recording audio on an SD memory card, only use AAC-LC (Advanced Audio Coding - Low Complexity).
*6 The audio output can be switched to the monitor output.
   Refer to the Operating Instructions on the our support web site for descriptions of how to switch the output.

### AI-VMD/AI People Counting for 360-degree fisheye

AI Video Motion Detection

• AI differentiates between vehicles and people. It further detects and sends warning notifications when they enter a specified area.

• Intruder detection:
  It is possible to issue an alarm when a moving object enters a specified area.

• Cross Line detection:
  It is possible to issue an alarm when an object moving in the specified direction crosses a specified threshold.

• Loitering detection:
  It is possible to issue an alarm when a moving object enters a specified area and stays there for a specified amount of time.

People Counting

• Cross Line Counting:
  It provides function of counting the number of people who crossed the line in a certain direction which is set with "Line"

• Area Counting(Queue Management):
  It provides function of counting the number of people in the set area.

Area Counting

Heat map

• Heat-map provides statistical information of traffic lines. Counts up both passing and loitering in the shooting area.

Loitering

Occupancy detection

• Detecting the congestion via network camera with AI engine enables that information to be used direct visitors in advance or help store staff work more efficiently.
### AI Privacy Guard for 360-degree fisheye

AI Privacy Guard

• To protect privacy and portrait rights, it is possible to automatically apply a mosaic the entire face and figure of a person photographed by the camera.

Multi-AI Server

- Multi-AI Server stores the best shot images and metadata captured by i-PRO network cameras. Then, it collates this data with the watch list registered in the client software and issues an alarm when a match is found. The server does not require expensive hardware because i-PRO network cameras handle the advanced processing. The server can also be installed on the same hardware as the VMS.
  The system comprises the Multi-AI Server, the AI application installed on i-PRO network cameras utilizing AI engines, and the Multi-AI plug-in software for the VMS client.
